

Homework #5: Due April 28th, 2009

Textbook Problems: Chapter 5

3, 9, 13, 15abc, 16, 19, 20, 21, 22, 23, 24, 25, 29, 36, 38, 45, 51

Extra Activities/Problems:

1. Water quality in Bangladesh has been contentious for many years. Originally surface water was used for drinking water, but it was heavily polluted. Then wells were dug to provide clean water. However, well water in Bangladesh is known to be contaminated with arsenic, a heavy metal. Use the internet to explore the water quality issues in Bangladesh. Write out a few sentences summarizing what you found. Be sure to address the past issues... pollution in the surface water, the discovery of arsenic in well water, etc as well as what steps are being taken to provide water to people from Bangladesh.
