Making PowerPoint Interactive

Rather than just presenting a linear slideshow, you can create hyperlinks with your slides enabling you to go anywhere within your presentation.

1. Select the image or text you wish to activate (be the “link”).

2. From the Slide Show menu, choose “Action Settings”

3. Decide whether you want to click on the link, or have it work when you roll the cursor across it (Mouse Click or Mouse Over)

4. Click on “Hyperlink to” and from “Slide” choose the slide you want to move to, then click OK.

View the slide in the “Show” mode to activate the interaction
