Student 2

**Theorem 1** *If every vertex of a graph  $G$  has a degree of at least 2, then  $G$  contains a cycle.*

**Proof.** [Direct Proof] Suppose that  $G$  is a connected graph, with each vertex having a degree of at least 2. Pick any vertex  $u$ , since  $u$  is a part of  $G$ , a connected graph, there exists a path  $u, u_1$  such that  $u = u_1$ . Since  $u_1$  has a degree of at least 2, there is another path from  $u_1, u_2$ . These paths create a walk  $u, u_1, u_2$ . Let this walk continue, leaving each vertex on an edge not previously used, until  $u$  occurs that has previously occurred. This gives us a closed walk  $u, u_1, u_2, \dots, u$  which is a cycle,  $C_1$ . Therefore,  $G$  has a cycle. ■
